## DETAILED ACTION

1. Applicants' response to the restriction/election requirements without traverse filed on 10/29/03 has been entered. The following is a detailed Office action of the elected species I, claims 1-12.

### *Specification*

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The abstract of the disclosure is objected to because it uses words which can be implied, i.e., "is provided", line 1. Correction is required. See MPEP § 608.01(b).

### *Claim Objections*

3. Claims 1-2, 4 and 9 are objected to because of the following informalities:

In claim 1, last line, ";;" should be replaced by -- . --.

In claim 2, last line, ";;" should be replaced by -- . --.

In claim 4, line 9, "and;" should be replaced by -- and --,

Art Unit: 2816

last line, “;.” should be replaced by -- . --.

In claim 9, last line, “;.” should be replaced by -- . --.

Appropriate correction is required.

#### ***Allowable Subject Matter***

4. Claims 1-12 are allowed after amended to overcome the objections noted herein above.

Claims 1-12 are allowed because the prior art of record fails to disclose or suggest the inclusion of a clock frequency controller in each of the plurality of proximate devices wherein the clock frequency controller either selected to function as a master operating mode or a slave operating mode in the apparatus and the operating of each mode is recited in claim 1. The closest prior art of record, Puckette et al. (Fig. 1) teaches proximate devices operate in different operating frequencies for reducing EMI as the present invention, however, each of the proximate devices cannot function as a master mode or a slave mode as required by the claim. Another closest prior art of record, Jeong et al., teaches an apparatus for controlling the delays of the clock signals for reducing the EMI. Another closest prior art of record, Cotens, does not have clock frequency controller in each of the plurality of devices, and Cotens uses phase shifts for reducing the EMI.

#### ***Conclusion***

5. This application is in condition for allowance except for the formal matters discussed herein above.

Art Unit: 2816

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Minh Nguyen whose telephone number is 703-306-9179. The examiner can normally be reached on Monday, Tuesday, Thursday, Friday 7:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy Callahan can be reached on 703-308-4876. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9318.
